▼ Key pair (login) [Info](#)

You can use a key pair to securely connect to your instance. Ensure that you have access to the selected key pair before you launch the instance.

Key pair name - *required*

WappProjectKey

[Create new key pair](#)

▼ Network settings [Info](#)

[Edit](#)

Network [Info](#)

vpc-00214836c156080e5

Subnet [Info](#)

No preference (Default subnet in any availability zone)

Auto-assign public IP [Info](#)

Enable

Firewall (security groups) [Info](#)

A security group is a set of firewall rules that control the traffic for your instance. Add rules to allow specific traffic to reach your instance.

☒ Create security group

☐ Select existing security group

We'll create a new security group called 'launch-wizard-1' with the following rules:

☒ Allow SSH traffic from

Helps you connect to your instance

Anywhere

0.0.0.0/0

☐ Allow HTTPS traffic from the internet

To set up an endpoint, for example when creating a web server

☐ Allow HTTP traffic from the internet

To set up an endpoint, for example when creating a web server

Rules with source of 0.0.0.0/0 allow all IP addresses to access your instance. We recommend setting security group rules to allow access from known IP addresses only.

Connect to Linux instance [info](#)

Connect to an instance to test, troubleshoot, deploy code, update software etc. You can use browser based methods or an SSH client.

Instance info

Instance

[i-09c9b82c97c5069a1](#)

State: Running

Status: 3/3 checks passed

[In web browser](#)

[In SSH client](#)

Choose how to connect

☒ Public subnet access [Managed SSH keys](#)

EC2 Instance Connect

Use for instances with public IPs or accessible via standard routing. Requires network connectivity to your instance. Connect using temporary SSH keys managed by AWS.

☐ Private subnet access [Managed SSH keys](#)

EC2 Instance Connect Endpoint

Use for instances in private subnets. Traffic is routed through a VPC endpoint. Connect using temporary SSH keys managed by AWS.

☐ Maximum security [IAM authentication](#)

SSM Session Manager

Uses IAM-based authentication. Connect without SSH keys, bastion hosts, or opening any inbound ports.

☐ Direct [Troubleshoot](#)

EC2 Serial Console

Access your instance's serial port for troubleshooting boot, network, and OS issues. Works without network connectivity. Requires account-level enablement.

Settings

Choose public IP address

☒ IPv4 address ([3.145.65.155](#))

☐ IPv6 address

Username

Enter the username defined in the AMI used to launch the instance. If you didn't define a custom username, use the default username, ec2-user. Read your AMI usage instructions to check if the AMI owner has changed the default AMI username.

santossoto — ubuntu@ip-172-31-13-40: ~ — ssh -i ~/Downloads/WappProjectKey.pem...

1. The Docker client contacted the Docker daemon.
2. The Docker daemon pulled the "hello-world" image from the Docker Hub. (amd64)
3. The Docker daemon created a new container from that image which runs the executable that produces the output you are currently reading.
4. The Docker daemon streamed that output to the Docker client, which sent it to your terminal.

To try something more ambitious, you can run an Ubuntu container with:
\$ docker run -it ubuntu bash

Share images, automate workflows, and more with a free Docker ID:
<https://hub.docker.com/>

For more examples and ideas, visit:
<https://docs.docker.com/get-started/>
